Team Contract Worksheet (PD2)

Team Identifier: G-3

Team Name (optional):

Date: Apr. 16, 2025

Team Member Names: Aubrey Levenhagen, Paige Geiken, Nathan Ervin, Adam Hmaddi

Submit your document as a PDF file in Canvas under the corresponding project assignment.

With this contract, team members are affirming this statement:

We share these goals and expectations, and agree to these policies, procedures, and consequences.

Each team member who has participated in this assignment and agrees to the contract should put their name in a comment in the Canvas assignment.

Every team member will complete a team evaluation worksheet at the end of the project. Refer to the sample worksheet.

Team Contract

GOALS: What are our team goals for this project? What do we want to accomplish? What skills do we want to develop or refine?
We hope to fully complete this project, and refine our programming for cyBot navigation. We want to work on the accuracy of our skills and measurements to better our project overall.
EXPECTATIONS: What do we expect of one another in regard to attendance at meetings, participation, frequency of communication, the quality of work, etc.?
We expect that we all are consistently showing up to lab sections and agreed-upon group meetings outside of class. We expect communication, and responses in the discord when questions or discussions are being had with the team. We hope that our team will put in their best work ethic.
POLICIES & PROCEDURES: What rules can we agree on to help us meet our goals and expectations?
We will show up promptly at agreed-upon times, and communicate to the best of our abilities about project updates. We'll assign and split up tasks so that everyone has a fair workload, and work with each other to manage the workload.
CONSEQUENCES: How will we address non-performance in regard to these goals, expectations, policies and procedures?
If someone isn't meeting agreed-upon deadlines or expectations we will work with them to identify the problem. If issues persist we can work with our TAs to find a solution and make use of the team surveys at the end of the project.
